

# 8<sup>th</sup> Grade GMAS Review Cheat Sheet

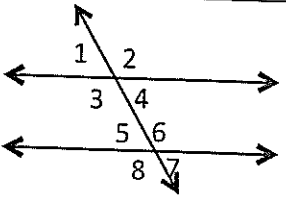

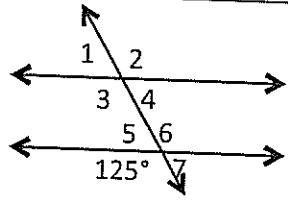

## Unit 1: Transformations, Congruence, and Similarity

### Transformations...

<p><b>Translation</b> - "slides" each point of a figure the same distance in the same direction without changing its size or shape and without turning it or flipping it.</p>	<p><b>Reflection</b> - "flips" a figure over a mirror or reflection line; An object and its reflection have the same shape and size, but the figures face in opposite directions.</p>	<p><b>Rotation</b> - turns a figure about a fixed point at a given angle and a given direction; An object and its rotation are the same shape and size, but the figures may be turned in different directions.</p>	<p><b>Dilation</b> - proportionally changes the size of an object (by shrinking or stretching), but not the shape</p>
 <p><b>SLIDE</b></p>	 <p><b>FLIP</b></p>	 <p><b>TURN</b></p>	 <p><b>ENLARGE/REDUCE</b></p>

To dilate points (x, y) multiply x and y by the scale factor

### Angles...

Relationships		Measurements	
	<p>Alternate Interior 3 &amp; 6                  Alternate Exterior 2 &amp; 8                  Consecutive Interior 4 &amp; 6                  Corresponding 1 &amp; 5                  Vertical 2 &amp; 3                  Adjacent 7 &amp; 8</p>		<p>m1 = 55°                  m2 = 125°                  m3 = 125°                  m4 = 55°                  m5 = 55°                  m6 = 125°                  m7 = 55°</p>

## Unit 2: Exponents

<p><b>Estimating Radicals:</b></p> <ol style="list-style-type: none"> <li>1) Draw a number line</li> <li>2) Find the closest perfect squares – one smaller and one larger</li> <li>3) Eliminate answer choices</li> </ol>	<p><b>Scientific Notation:</b></p> <p>3,420,000 = <math>3.2 \times 10^6</math>                  .00000000986 = <math>9.86 \times 10^9</math></p> <ol style="list-style-type: none"> <li>1. Place decimal behind first non 0 number</li> <li>2. Multiply by 10</li> <li>3. Count spaces new to old (exponent) Left = negative and right = positive</li> </ol>	<p><b>Multiplying:</b></p> <p><math>(2.3 \times 10^5) (1.4 \times 10^2)</math></p> <ol style="list-style-type: none"> <li>1) <math>2.3 \times 1.4 = 3.22</math></li> <li>2) <math>10^5 \times 10^2 = 10^7</math></li> <li>3) <math>3.22 \times 10^7</math></li> </ol>	<p><b>Dividing:</b></p> <p><math>(6 \times 10^8) \div (2 \times 10^2)</math></p> <ol style="list-style-type: none"> <li>1) <math>6 \div 2 = 3</math></li> <li>2) <math>10^8 \div 10^2 = 10^6</math></li> <li>3) <math>3 \times 10^6</math></li> </ol>
---	--	---	---

### Exponent Rules – must have the same base!! Keep the base!!

<p><b>Multiplying:</b> add exponents <math>4^2 \times 4^6 = 4^8</math></p>	<p><b>Dividing:</b> subtract exponents <math>6^7 \div 6^4 = 6^3</math></p>	<p><b>Power to a Power:</b> multiply exponents <math>(3^2)^3 = 3^6</math></p>	<p><b>Negatives:</b> flip to become positive <math>2^{-6} = \frac{1}{2^6}</math></p>										
<p><b>Pythagorean Theorem:</b> only works with right <math>\Delta</math>'s <math>a^2 + b^2 = c^2</math> a &amp; b are legs c is hypotenuse, longest side, opposite right angle</p>	<p>You are creating a picture frame in the shape of a right triangle. You have calculated the longest side to be 15 inches. What would be the length of the other two sides?</p> <p><math>a^2 + b^2 = 15^2</math>  <math>a^2 + b^2 = 225</math>  <math>9^2 + 12^2 = 225</math>  <math>81 + 144 = 225</math></p> <p>The other two sides are 9 in. and 12 in.</p>	<p><b>Is it a Right Triangle?</b> Plug into <math>a^2 + b^2 = c^2</math> (c is biggest #)</p> <table style="width: 100%;"> <tr> <td style="width: 50%;"><b>4, 6, 8</b></td> <td style="width: 50%;"><b>3, 4, 5</b></td> </tr> <tr> <td><math>4^2 + 6^2 = 8^2</math></td> <td><math>3^2 + 4^2 = 5^2</math></td> </tr> <tr> <td><math>16 + 36 = 64</math></td> <td><math>9 + 16 = 25</math></td> </tr> <tr> <td><math>52 \neq 64</math></td> <td><math>25 = 25</math></td> </tr> <tr> <td><b>NO</b></td> <td><b>YES</b></td> </tr> </table>		<b>4, 6, 8</b>	<b>3, 4, 5</b>	$4^2 + 6^2 = 8^2$	$3^2 + 4^2 = 5^2$	$16 + 36 = 64$	$9 + 16 = 25$	$52 \neq 64$	$25 = 25$	<b>NO</b>	<b>YES</b>
<b>4, 6, 8</b>	<b>3, 4, 5</b>												
$4^2 + 6^2 = 8^2$	$3^2 + 4^2 = 5^2$												
$16 + 36 = 64$	$9 + 16 = 25$												
$52 \neq 64$	$25 = 25$												
<b>NO</b>	<b>YES</b>												

### Unit 3: Geometric Applications of Exponents

<p><b>Volume of a Cylinder:</b>  <math>V = Bh</math> (B = area of base)  <math>V = \pi r^2 h</math></p> <table border="1" style="margin-left: 20px; border-collapse: collapse;"> <tr> <td style="padding: 2px;">y</td> <td style="padding: 2px;">3</td> <td style="padding: 2px;">6</td> <td style="padding: 2px;">9</td> <td style="padding: 2px;">82</td> </tr> </table> <p>A Coke can is 5 inches tall and has a radius of 2 inches. What is the volume of the can?  <b>L:</b> <math>r = 2</math> <math>h = 5</math>  <b>W:</b> <math>V = \pi r^2 h</math>  <b>P:</b> <math>V = (3.14)(2^2)(5)</math>  <b>C:</b> <math>V = 62.8 \text{ in}^3</math></p>	y	3	6	9	82	<p><b>Volume of a Cone:</b>  <math>V = \frac{1}{3} Bh</math>  <math>V = \frac{1}{3} \pi r^2 h</math></p> <p>What is the volume of an ice cream cone with a radius of 3 and height of 4?  <b>L:</b> <math>r = 3</math> <math>h = 4</math>  <b>W:</b> <math>V = \frac{1}{3} \pi r^2 h</math>  <b>P:</b> <math>V = \frac{1}{3} (3.14)(3^2)(4)</math>  <b>C:</b> <math>V = 37.7</math></p>	<p><b>Volume of a Sphere:</b>  <math>V = \frac{4}{3} \pi r^3</math></p> <p>You are playing softball with friends. The ball has a diameter of 10 cm. What is the volume of the softball?  <b>L:</b> <math>d = 10</math> <math>r = 5</math>  <b>W:</b> <math>V = \frac{4}{3} \pi r^3</math>  <b>P:</b> <math>V = \frac{4}{3} (3.14)(5^3)</math>  <b>C:</b> <math>V = 523.3 \text{ cm}^3</math></p>	<p><b>Label</b> the information  <b>Write</b> the formula  <b>Plug</b> in the information  <b>Chug</b> out the answer</p>
y	3	6	9	82				

### Unit 4: Functions

<p><b>Function –</b>          one output for every input (x values can't repeat, pass vertical line test)</p>			<table border="1" style="border-collapse: collapse;"> <thead> <tr> <th style="padding: 2px;">x</th> <th style="padding: 2px;">y</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">2</td> <td style="padding: 2px;">8</td> </tr> <tr> <td style="padding: 2px;">3</td> <td style="padding: 2px;">9</td> </tr> <tr> <td style="padding: 2px;">5</td> <td style="padding: 2px;">10</td> </tr> <tr> <td style="padding: 2px;">4</td> <td style="padding: 2px;">11</td> </tr> </tbody> </table>	x	y	2	8	3	9	5	10	4	11
x	y												
2	8												
3	9												
5	10												
4	11												
<p><b>Not a Function –</b>          Doesn't pass vertical line test, x values repeat...</p>			<table border="1" style="border-collapse: collapse;"> <thead> <tr> <th style="padding: 2px;">x</th> <th style="padding: 2px;">y</th> </tr> </thead> <tbody> <tr> <td style="padding: 2px;">1</td> <td style="padding: 2px;">3</td> </tr> <tr> <td style="padding: 2px;">2</td> <td style="padding: 2px;">2</td> </tr> <tr> <td style="padding: 2px;">2</td> <td style="padding: 2px;">10</td> </tr> <tr> <td style="padding: 2px;">3</td> <td style="padding: 2px;">4</td> </tr> </tbody> </table>	x	y	1	3	2	2	2	10	3	4
x	y												
1	3												
2	2												
2	10												
3	4												
<p><b>Linear –</b>          Have to have a common difference, have the slope intercept form (<math>y = mx + b</math>), and form a straight line when graphed.</p>			<p><math>y = 2x + 1</math>  <math>y = -9x - 4</math></p>										
<p><b>Nonlinear –</b>          Are a curved or broken line when graphed; in the equation there are exponents, variables multiplied together, or variables in the denominator.</p>			<p><math>y = x^3</math>  <math>8 = 6xy</math>  <math>3 =</math></p>										

### Unit 5: Linear Functions

**To find an equation, you always need a slope (m) and y-intercept (b)!!!!**

<p><b>Equation From a Graph</b></p> <ol style="list-style-type: none"> <li>Find the y-intercept (b)</li> <li>Locate another point</li> <li>From the "b" use rise over run to get to the next point – this is your slope (m)</li> <li>Put "m" and "b" into <math>y = mx + b</math></li> </ol>	<p><b>Equation From a Table</b></p> <ol style="list-style-type: none"> <li>Find = m</li> <li>Pick a point (x,y) and plug into <math>y = mx + b</math> along with m</li> <li>Solve for "b"</li> <li>Put "m" and "b" into <math>y = mx + b</math></li> </ol> <table border="1" style="margin-left: 20px; border-collapse: collapse;"> <tr> <td style="padding: 2px;">x</td> <td style="padding: 2px;">y</td> </tr> <tr> <td style="padding: 2px;">-1</td> <td style="padding: 2px;">-2</td> </tr> <tr> <td style="padding: 2px;">0</td> <td style="padding: 2px;">2</td> </tr> <tr> <td style="padding: 2px;">1</td> <td style="padding: 2px;">6</td> </tr> </table>	x	y	-1	-2	0	2	1	6	<p><b>Equation From <math>(x_1, y_1)</math> <math>(x_2, y_2)</math></b></p> <ol style="list-style-type: none"> <li>Find = m</li> <li>Pick a point (x,y) and plug into <math>y = mx + b</math> along with m</li> <li>Solve for "b"</li> <li>Put "m" and "b" into <math>y = mx + b</math></li> </ol> <p>Determine equation from points (0, -4) and (0, 5).</p>	<p><b>Word Problem</b></p> <p>The distance traveled on a trip is directly proportional to the speed of the car. A car traveled 300 miles in six hours. Write an equation to represent y, the distance the car would travel in x hours.</p>
x	y										
-1	-2										
0	2										
1	6										

Types of SLOPE			
POSITIVE SLOPE	NEGATIVE SLOPE	UNDEFINED SLOPE	ZERO SLOPE
Graphed line moves <b>upward</b> from left to right.	Graphed line moves <b>downward</b> from left to right.	Graphed line is a <b>vertical line</b> (straight up and down).	Graphed line is a <b>horizontal line</b> .
$y = 6x + 1$ $y = -4$	$y = -3x + 2$ $y = x - 1$	$x = 4$ $x = -6$ $x = 3$	$y = 5$ $y = -2$ $y = 8$

### Unit 6: Linear Models & Tables

#### Rate of Change

Increasing – positive slope	Decreasing – negative slope	Greatest ROC = Ignore the sign (doesn't matter if positive or negative) and choose biggest number	Least ROC = Ignore the sign (doesn't matter if positive or negative) and choose smallest number
-----------------------------	-----------------------------	---	---

#### Stories from Graphs

Going away from = distance increasing = positive slope	Going towards = distance decreasing = negative slope	Running = steeper line	Walking = less steep line
--	--	------------------------	---------------------------

#### Line of Best Fit

1. Put your ruler in the middle of as many points as possible	2. Draw a straight line across whole graph	3. Find your "b" - Look at where the line crosses the y-axis	4. Find your slope = pick two points and count rise over run.
---	--	--	---

#### Scatter Plots

Positive Correlation	Negative Correlation	No Correlation	Strong – close together Weak – far apart
----------------------	----------------------	----------------	---

**Unit 7: Systems of Equations**

**Solution: (x,y)**  
Where the lines intersect

**One Solution:**  
This is the most common situation and it involves **lines that intersect exactly 1 time.**

**No Solution:**  
This only happens when the **lines are parallel**. As you can see, parallel lines are not going to ever meet.

Example of a stem that has no solution:  
Line 1:  $y = 5x + 13$   
Line 2:  $y = 5x + 12$

**Infinitely Many Solutions:**  
This is the rarest case and only occurs when you have the **same line**. Consider, for instance, the two lines below ( $y = 2x + 1$  and  $2y = 4x + 2$ ). These two equations are really the same line.

Example of a system that has infinite solutions:  
Line 1:  $y = 2x + 1$   
Line 2:  $2y = 4x + 2$
